

# MULTIHANCE MRI IMAGING

Big Sky Diagnostic Imaging of Billings is pleased to announce the usage of MultiHance® as the standard MRI contrast. MultiHance has been shown to achieve better lesion enhancement than other contrast agents on the market. By using MultiHance with 3T MRI, Big Sky is continually working to provide superior, high-resolution imaging studies. Also, by using MultiHance, Big Sky is keeping patient safety in the forefront, as MultiHance has no known NSF cases.

MultiHance

## BENEFITS

- 3.0 Tesla MRI, offering optimal resolution and detail
- MultiHance has twice the T1 relaxivity compared to any other gadolinium agent (leading to higher signal intensity; hence, better visualization)
- MultiHance provides significantly improved CNS lesion enhancement and greater quantitative lesion-to-brain enhancement than other agents at the same dose
- MultiHance uptake into functioning hepatocytes (<4% of agent is secreted via the kidneys)
- No known cases of gadolinium-caused NSF
- Highly experienced MRI technologists
- Comfortable outpatient environment
- Local radiologists read all studies
