

SCREENING IAC MRI SCANS

Big Sky Diagnostic Imaging of Billings is pleased to offer Screening Inner Auditory Canals (IAC) MRI scans. The Screening IAC MRI scan is ideal for identifying acoustic neuromas in the IACs. Using our 3.0T MRI, the detail and clarity of the images cannot be matched by any other MRI.

BENEFITS

- Walk-in and immediate scheduling available
- Patient can be scanned in less than ten minutes
- 3.0T MRI provides extreme detail and clarity of the nerves of the inner ear
- Reduced cost scan (over 50% price reduction)

SCANNING DETAILS

The power of our 3.0T MRI allows fast scan times with exceptional resolution and clarity. A patient can have the Screening IAC sequence completed in less than ten minutes, but have the clarity one would expect from a much longer study. The Screening IAC sequence is taken from the full IAC protocols.

We utilize a scanning technique that is unique to our 3.0T system. Obtaining sub-millimeter T2 images, we can provide reconstructions in multiple planes.

SIEMENS 3.0T MRI

WHY BIG SKY DIAGNOSTIC IMAGING?

Our commitment to Superiority exists throughout the entirety of the clinic. Our Superior Technology is on the cutting edge of diagnostic medicine. Our equipment includes a 3.0 Tesla MRI scanner and a Dual Source CT scanner. We have Superior Service including quick report turnarounds, immediate access to images through our PACS system, and flexible scheduling. We treat patients with Superior Care, making them feel like they are family with our comfortable amenities and empathetic staff.
